

ACCESS FLOORING

ACCESS FLOORING

Our access flooring system is an elevated floor that can be installed to various heights depending on the sub-floor to ceiling height. The system consists of 600 x 600mm panels supported by various under structure systems which includes pedestals and stringers.

Access flooring is the ultimate solution to new or renovated areas and provide extensive plenum for cable management control etc. This type of flooring is ideally suited for computer rooms, data centres and even office areas. It allows for total flexibility for rearrangement of computer equipment and easy repair or replacement of any cabling.

The finishes available are carpeting (factory laminated or carpet riles) electrostatic vinyl tiles, high pressure laminated. This system is non-combustible, extremely strong and has great bearing capacity.

NetPro's focus is on **quality and service**
