

DS&R Recovery

DATA STORAGE AND RECOVERY

WHAT WOULD YOU DO IF YOUR BUSINESS AND SOCIAL DATA IS LOST?

Like all other Disasters; they never happen to us – until they do! The effect of all disasters can be minimised if preventative planning is done! But the alternatives need to be tested to ensure functionality.

NetPro has two Data Storage premises which are situated on two different area grids. Both sites are fully redundant and secure with multi-tier failover. Both sites are certification pending.

NetPro Data Storage and Recovery (DS&R) clients will be required to test the validity of their backed-up data regularly and stringently.

The Data that will be stored at the **NetPro** Data Centre will be fully protected.

Only the disk array management machines will know exactly where the data is stored. The data will be encrypted and strong passwords, known only to the client, can be used to access the information.

Our premises has secure parking and visits will be strictly by prior arrangement.

NetPro's focus is on **quality and service**

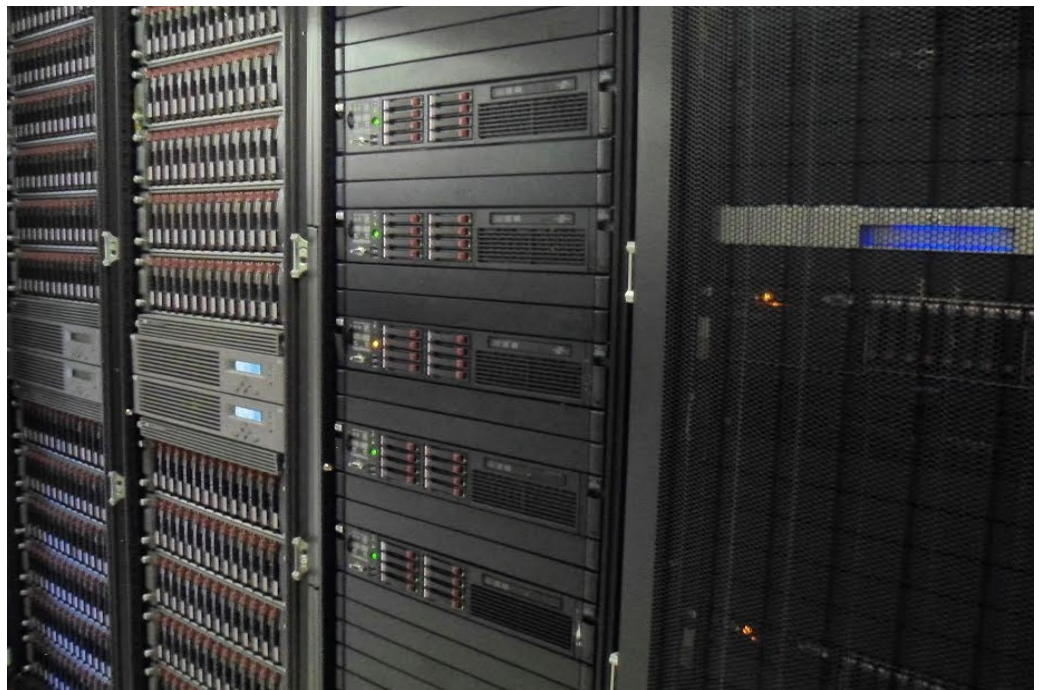

DS & Recovery

DATA STORAGE AND RECOVERY

Plans are currently underway to include a fully functional Disaster Recovery operation. This facility should be fully operational by the middle of 2016. This will provide for our clients to continue “business as usual” from our premises if a catastrophic disaster occurs. It will be totally transparent to the people our clients do business with; right down to us re-directing their phone calls seamlessly to our premises.

The Data Storage and Data management machines deployed at the NetPro DS & R sites are cutting edge enterprise equipment, by HP.

We cater for users who are serious about their Data Storage!

NetPro's focus is on **quality** and **service**
