FIRE SUPPRESSION

Even one day lost to fire-related downtime can result in lost revenue, customers and profits. A good fire suppression system will eliminate all these problems.

We install HFC-227cu (also known as FM-200) which provides an economically, environmentally and of course, people friendly gas suppression.

Solution; It extinguishes a fire quickly by discharging in 10 seconds or less.

We also install and service valve and sprinkler systems to A S I B specifications and regulations.

The Fire alarm systems we install are normally connected to the Building Management Systems (BMS), but can also be configured to operate in a stand-alone environment.

NetPro's focus is on **quality and service**
